# DHRUB PANDIT

+9779803862836 | GitHub | LinkedIn | LeetCode | panditdhrub0@gmail.com

## PROFESSIONAL SUMMARY

Nepal Engineering Council (NEC) licensed Computer Science Engineer with hands-on experience building scalable full-stack web applications using React.js, Node.js, Express.js, and MongoDB. Experienced in authentication systems (OAuth 2.0, JWT), REST API development, AI API integrations, and cloud deployment. Passionate about backend engineering, distributed systems, and building AI-powered SaaS products.

## EDUCATION

**R. R. Institute of Technology**, Bengaluru, India — Sep 2022 - May 2026

B.E. in Computer Science and Engineering (VTU) | CGPA: 8.94/10

## TECHNICAL SKILLS

**Languages:** C, C++, Python, JavaScript (ES6+), TypeScript, PHP, SQL, HTML5, CSS3 (CSS Variables, Flexbox/Grid)

**Frameworks & Web Tech:** React.js (v19), Node.js, Express.js, Django, OAuth 2.0 (Google & GitHub direct flow), JWT Authentication (jsonwebtoken), REST APIs, Socket.IO, Axios, Lenis (Smooth Scroll), Floating UI, Bootstrap

**Databases & Developer Tools:** MongoDB, Redis, Database Schema Design & Indexing, Rate Limiting (Token Bucket, Fixed Window), Distributed Locking, Mongoose, MySQL, MongoDB Atlas, Git, GitHub, Vite, ESLint, Postman, Cursor IDE, Nodemon, Node-Cron, Web Scraping (Axios/RegEx)

**AI & Methodologies:** Applied Machine Learning (ML), LLM Benchmarking, Artificial Analysis Dataset Ingestion (ELO, Latency, & Pricing metrics), Prompt Engineering, Data Preprocessing, Data Structures & Algorithms (200+ LeetCode problems solved)

**APIs & Integrations:** Gemini API, xAI / Grok API (Grok 4.5), OpenAI & Mistral APIs, OpenRouter, Groq API, Multi-LLM API Fallback Architectures, Razorpay Payment Gateway

**DevOps & Deployment:** Docker, Docker Volumes, Render, Vercel (Frontend & API deployments), MongoDB Atlas

## EXPERIENCE

**Karunadu Technologies Private Limited | Certificate** — Feb 2026 - May 2026

*Python Programming & Applied Machine Learning Intern*

- Completed a professional internship focusing on Python software development and applied machine learning models.
- Engineered a Lung Cancer Prediction platform using supervised classification algorithms and integrated it into a Django web backend.
- Developed a Dry Bean Classification model to analyze and categorize bean species, performing feature scaling, extraction, and comparison of multiple classification algorithms.
- Applied data preprocessing, model selection, evaluation metrics (accuracy, precision, recall, F1-score), and deployment workflows to build end-to-end solutions.

## PROJECTS

**AUDEX AI - LLM Spend Auditing & Optimization Platform | Live Demo, GitHub** — Jun 2026 - sep 2026

*React.js, Node.js, Express.js, MongoDB, Mongoose, Axios*

- Engineered a full-stack SaaS platform (AUDEX AI) to optimize enterprise LLM spend by auditing subscription allocations, user seats, and API token volumes.
- Built interactive React interfaces featuring dynamic token calculators, side-by-side subscription vs. API savings comparisons, and visual status indicators.
- Integrated Google and GitHub OAuth 2.0 authentication flows directly via API routes, managing sessions using stateless JSON Web Tokens (JWT) and custom auth middleware.
- Implemented a robust credit-based tier restriction system (Starter, Pro, ProMax) with prioritized credit deduction logic and custom auth middleware.

**LLM-Powered Automated Quiz Generation Platform | Live Demo, GitHub** — Aug 2025 - Nov 2025

*React.js, Node.js, Express.js, MongoDB, REST APIs*

- Built a full-stack platform that generates interactive quizzes from user-provided topics using a large language model, supporting quiz creation, taking, and management workflows.
- Developed responsive React.js interfaces and Node.js/Express.js REST APIs for quiz generation, user authentication, and data management.
- Modeled quizzes, user profiles, and results in MongoDB to provide persistent storage and efficient data retrieval.

**Web-Based Real-Time & AI Chat Application | GitHub** — Sep 2023 - Oct 2023

*HTML, CSS, JavaScript, PHP, MySQL, Python*

- Engineered a web chat application supporting user-to-user and user-to-AI conversations with instant message delivery.
- Developed a PHP-based AI chat interface and conversational workflow, with a responsive front end built in HTML, CSS, and JavaScript.
- Designed a MySQL relational schema to store user accounts, chat histories, and conversation data.
